K J SOMAIYA SCHOOL OF ENGINEERING
DEPARTMENT OF COMPUTER ENGINEERING

Project Title

ZenTasks(Dynamic Task Assignment in Remote Teams)

Group Members Details:

Roll No & Name of Students:

16010123818-Divya Khanolkar

16010123805-Krisha Kharote

Objective:

To create an efficient, user-friendly platform for managing tasks in remote teams, with robust features for administrators and regular users, all aimed at boosting productivity and collaboration.

Work distribution (functionality wise):

[Enter the distribution of work among group members, specifying the functionalities each member worked on]

Name	Tasks
Krisha kharote & Divya Khanolkar	Designed Figma
Krisha Kharote	Signup,Signin frontend & authentication
Divya Khanolkar	Functionality of users and task management(deletion,create task,edit,subtasks)
Krisha Kharote	Dashboard Frontend(Navbar,Sidebar,profile)
Divya Khanolkar	Managed Backend for User and Tasks

Performing Deletion of the user

The screenshot shows the ZenTasks interface. On the left is a sidebar with navigation links: Dashboard, Tasks, Completed, In Progress, To Do, Team (selected), and Settings. The main area is titled 'Team Members' and contains a table of users. A modal dialog is open in the center, asking 'Are you sure you want to delete the selected record?' with 'Cancel' and 'Delete' buttons. The table has columns: Full Name, Title, Email, User_id, and Active. The 'Active' column shows 'Disabled' for all users.

Full Name	Title	Email	User_id	Active
DK darshan Kantharia	Python developer	darshank24@gmail.com	6716192149a20137987f086f	Disabled

The screenshot shows the 'Completed Tasks' board in ZenTasks. It has two tabs: 'Board View' (selected) and 'List View'. The board displays tasks as cards. A context menu is open over one of the cards, showing options: Edit, Add Sub-Task, Duplicate, and Delete.

K J SOMAIYA SCHOOL OF ENGINEERING
DEPARTMENT OF COMPUTER ENGINEERING

Tech Stack Used :

FrontEnd

- React+vite
- Redux Toolkit
- Headless UI
- Tailwind CSS

Database

- MongoDB

Features implemented:

Admin Features:

For administrators, we've included features like:

User Management: Admins can create and manage user accounts, and add team members easily.

Department of Computer Engineering

Task Assignment: Tasks can be assigned to one or more users, and admins can track the status of these tasks.

Task Properties: Tasks can be categorized as 'to do,' 'in progress,' or 'completed.' Admins can also set task priority levels and manage sub-tasks.

Asset Management: Admins can upload and manage assets like images or documents related to tasks.

User Account Control: Admins can delete task or the user.

Technical Issues Encountered and Solved:

[Describe the technical issues faced during implementation and how they were resolved]

Task and User Deletion Issue

- **Issue:** The initial implementation faced difficulties with deleting tasks and user accounts, resulting in errors that affected data consistency within the system.
- **Resolution:** After analyzing the underlying code structure and database interactions, the deletion functionality was modified to ensure proper removal of tasks and users. Additional checks were implemented to prevent accidental deletion, and the feature now works as expected without impacting related data.

Asset Uploading Issue

- **Issue:** Problems were encountered in the asset upload section, specifically with file handling and storage integration. Uploaded assets were not being consistently stored or retrieved, causing disruptions in functionality.
- **Current Status:** The asset uploading issue is still under investigation. The team is exploring potential solutions, such as adjusting file handling configurations and verifying server storage settings to ensure stable asset management.

Notification Panel Error

- **Issue:** The notification panel, which is designed to inform users of task updates and changes, has been experiencing errors in displaying and updating notifications in real-time.

- **Current Status:** Efforts to resolve this error are ongoing. Preliminary troubleshooting is focused on reviewing the notification system's integration with task status updates and exploring methods to improve its reliability and responsiveness.

The future scope of the project is:

- AI-Driven Task Optimization and Predictive Analytics
- Mobile Application Expansion for Real-Time Connectivity
- Advanced Performance Analytics and Reporting
- Customizable Workflows for Department-Specific Needs
- Integration with Corporate Systems for a Unified Platform
